

Results from using ProOne Fuel Maximizer to clean up EGR valves, an example of external cleaning of just one of many parts contaminated with carbon. (Other parts include injectors tips, piston rings, valves, turbos, waste gates and SCR-particulate filter exhaust systems.)

BEFORE

AFTER

Major carbon build up can be reduced by routine use of ProOne Fuel Maximizer added to the fuel system at 1 oz. per 20 gallons. Additional benefits:

- Reduction of algae/varnish build up in the fuel tank
- Reduced fuel filter clogging
- Seal protection in injector pumps and injectors with built in seal conditioners
- Lubricity agents for protection and reduced wear
- More efficient combustion with less emissions, improved fuel economy and increased performance.
