

# AGROGREEN

## ORGANIC FERTILIZER

<u>TYPE OF CROP</u>	<u>DILUTION</u>	<u>RECOMMENDED APPLICATION FREQUENCY</u>
Leafy vegetables, cabbage, lettuce, etc.	1:300 to 1:400	Spray leaves, roots & soil every 7 - 10 days.
Carrot, cucumber, onion, mango, potato, tobacco green bean, garlic, egg plant corn, flowers, etc.	1:300	Spray fruit, roots & soil every 14 to 21 days.
Strawberries, grapes, pepper, honeydew, etc.	1:200	Spray plant, roots & soil every 7 to 10 days.
Fruit trees	1:200	Spray leaves, trunk & soil every 14-21 days.

### NOTES:

For applying on tree roots to allow systemic uptake, ensure that the total amount of solution drenched onto the soil is sufficient to reach the root tips of the tree which may be several metres deep and several metres away from the main tree trunk in the case of a large tree.

Spider mites, aphids and numerous other insect pests tend to attack younger leaves at the branch tips and older leaves on the underside because the waxy cuticle layer is thinner than the upper side of the leaves. Accordingly, **AGROGREEN** should also be sprayed on the underside of leaves where insect pests pose as a significant problem.

Pre-germination seed treatment : Immerse seeds in 1:100 **AGROGREEN** solution for approximately 40 minutes.
