

## **Mosquito Barrier for Tick Control.**

Mosquito Barrier should be used on your property to repel ticks.

Use the same dilution rates as you would for mosquitoes and ***shake the bottle well*** before mixing. Mosquito Barrier is 100% pure garlic juice so it may have settled.

### **TIPS ON SPRAYING FOR TICKS:**

- Keep grass mowed short, maximum to ankle height, and rake all leaves and dispose.
- Increase the amount of sun to the ground by pruning trees.
- Lyme carrying ticks like humidity and avoid dry conditions.
- Keep watering to a minimum.
- Spray grass and shrubs, underneath shrubs, under decks, porches and on any wood pile.
- Apply in May and into June when nymphs are most active.
- For every liter of water use a minimum of 30 ml of Mosquito Barrier.  
You may double up to 60 ml per liter of water if ticks are already present. Wait a minimum of 3 days before spraying again.

### **Additional tips for creating a tick and mosquito safe zone around your home:**

- Empty objects that can collect water- such as flower plants, bird baths.
- Clear brush around homes, lawns and property lines. This reduces deer and other animals.
- Keep bird feeders away from your house (this assists to reduce rodents)
- Place a 3-ft wide barrier of wood chips or gravel between lawns and wooded areas to restrict tick migration into recreational areas.
- Keep playground equipment, decks, and patios away from yard edges and trees.
- Discourage unwelcome animals (such as deer, rodents, raccoons, and stray dogs) from entering your yard (see above points).
- For additional information, please see: Lyme Ontario <https://lymeontario.com/> or <https://etick.ca/en> for identification and national monitoring.
